

Vivek Kumar Singh

Senior Frontend Engineer | Technical Lead | Real-Time Systems

+91-9650037240 | viveksingh1291@gmail.com | [LinkedIn](#) | [Portfolio](#)

Professional Summary

Senior Frontend Engineer with **8+ years** of experience building scalable React applications for real-time, data-intensive systems. Technical leader with founding engineer experience establishing architectural foundations. Expertise in React ecosystem, performance optimization, real-time systems (SSE/WebSocket), and technical mentorship. Proven ability to own features end-to-end and lead high-performing teams.

Technical Skills

Frameworks	React.js, Redux Toolkit, React Query, Context API, Next.js(familiar)
Languages	TypeScript, JavaScript ES6+, HTML5, CSS3, SASS, Tailwind CSS
Testing	Jest, React Testing Library, Unit Testing, WCAG Accessibility
Build Tools	Webpack, Vite, npm, Git
Real-Time	Server-Sent Events (SSE), WebSocket, Socket.io
DevOps	GitHub Actions, Jenkins, CI/CD, Docker (familiar)
Cloud	AWS EC2 (familiar), MongoDB (familiar)
Tools	Sentry, PostHog, REST APIs, Performance Optimization

Work Experience

DigitalPaani

Oct 2024 – Nov 2025

Frontend Lead / Senior Frontend Engineer

Gurgaon, Haryana

- Owned frontend architecture for **Web SCADA++**, real-time IoT platform handling **100s+** concurrent data streams with sub-second latency
- Architected React + **SSE** rendering pipeline with batching and virtualization; achieved **40% faster** load time
- Built **visual workflow designer** with drag-and-drop interactions and formula evaluation, enabling non-technical teams to configure logic
- Established **GitHub Actions CI/CD** pipelines and code review standards; mentored team on real-time patterns

Done Deal

May 2023 – July 2024

Senior Software Engineer (Founding Frontend Engineer)

Gurgaon, Haryana

- Joined as **first frontend engineer**, architected entire stack from scratch using React, Redux Toolkit, TypeScript
- Designed production-grade component library with TypeScript contracts and comprehensive tests; **30-40% effort reduction**
- Mentored 2+ engineers, established code review standards, ADRs, and testing best practices
- Implemented **virtualized rendering, memoization, and caching** patterns

Dotpe

Nov 2020 – May 2023

Senior Software Engineer

Gurgaon, Haryana

- Led frontend for loyalty platform serving 50,000+ merchants and POS app at **5,000+** locations
- Architected COVID-era features (contactless ordering) in **2-week** timeline with zero downtime
- Resolved high-severity production issues, improved merchant stability and satisfaction

Healthkart

July 2019 – April 2020

Software Engineer

Gurgaon, Haryana

- Developed responsive React components and implemented **SEO** optimization and **AMP** pages
- Worked with EJS templating for dynamic server-side content; resolved critical bugs and performance issues

SoftSolutionZone

June 2018 – May 2019

Front End Developer

Ghaziabad, Uttar Pradesh

- Developed reusable Angular components with routing implementation; designed responsive web pages

- Spearheaded development of multiple projects; enhanced frontend quality using HTML, CSS across browsers
- Adapted to project requirements utilizing JavaScript, AngularJS, and ReactJS

Key Projects

Web SCADA++ Real-Time Industrial IoT Dashboard

DigitalPaani, 2024–2025

Designed and delivered a browser-based SCADA platform for monitoring live sensor data across industrial plant infrastructure. Designed a React + SSE rendering pipeline capable of sustaining 100s+ concurrent data streams with sub-second UI latency. Used daily by **50–200 plant operators and engineers** to monitor critical systems in real time. Achieved **~40% faster load time** via Vite-based build optimization and route-level code splitting.

Visual Workflow Designer No-Code Plant Configuration Tool

DigitalPaani, 2024–2025

Built a React-based drag-and-drop workflow editor enabling **nontechnical operations staff** to visually model plant logic and configure Excel-style formula calculations without raising engineering tickets. Significantly reduced the time-per-configuration task and freed the engineering team from routine plant setup requests.

Component Library Reusable UI System

Done Deal, 2023–2024

Designed and built a **production-grade component library** from scratch covering forms, data tables, modals, dropdowns, and layout primitives. Used compound component patterns for complex components to give consumers full control without forking. Established TypeScript contracts, Storybook documentation, and unit test coverage for all components. Reduced estimated feature development effort by **30–40%** across the product lifecycle and became the foundation for all subsequent UI work.
